#       This file is provided as-is by Unicode, Inc. (The Unicode Consortium).
#       No claims are made as to fitness for any particular purpose.  No
#       warranties of any kind are expressed or implied.  The recipient
#       agrees to determine applicability of information provided.  If this
#       file has been provided on magnetic media by Unicode, Inc., the sole
#       remedy for any claim will be exchange of defective media within 90
#       days of receipt.
#
#       Recipient is granted the right to make copies in any form for
#       internal distribution and to freely use the information supplied
#       in the creation of products supporting Unicode.  Unicode, Inc.
#       specifically excludes the right to re-distribute this file directly
#       to third parties or other organizations whether for profit or not.
#
#   General notes:
#
#   This table contains the the mappings between the Unicode
#       Han ideographic character set (Unihan) and various
#       national and industrial standards
#
#   Format:
#       There are 9 fields for each of the primary source character sets.
#       These fields are ordered as follows:
#
#       Unicode:
#           4 digit hexadecimal code, beginning at U4E00.
#       GB:
#           5 digit decimal.
#               Digit 1 is the GB subset.
#               Digits 2 to 5 are the code in row/column format.
#           The GB subsets are:
#               0 = GB 2312-80.
#               1 = GB 12345-90.
#               3 = GB 7589-87.
#               5 = GB 7590-87.
#               7 = General Purpose Han Characters for Modern Chinese.
#               8 = GB 8565-89.
#       Big 5:
#           4 digit hexadecimal.
#       CNS:
#           5 digit hexadecimal.
#               Digit 1 indicates a subset of CNS 11643-1986.
#               Digits 2 to 5 are the code in interchange format.
#           The CNS subsets are:
#               1 = Primary.
#               2 = Less frequent characters.
#               E = User characters.
#      JIS:
#          5 digit decimal.
#              Digit 1 is the JIS subset.
#              Digits 2 to 5 are the code in row/column format.
#          The JIS subsets are:
#              0 = JIS X0208-1990.
#              1 = JIS X0212-1990.
#              I = IBM extensions (4 digit hexadecimal).
#      KSC:
#          5 digit decimal.
```

```
#               Digit 1 is the KSC subset.
#               Digits 2 to 5 are the code in row/column format.
#           The KSC subsets are:
#               0 = KSC 5601-1987.
#               1 = KSC 5657-1991
#               2 = IBM extensions (4 digit hexadecimal).
#       ANSI Z39.64-1989 (EACC):
#           6 digit hexadecimal.
#       CCCII, level 1:
#           6 digit hexadecimal.
#       Xerox:
#           7 digit octal, with a colon separating each byte.
#
#       Empty fields contain the single character '*'.
#
#       NOTES:
#
#       The mappings in this table between Unicode and GB, CNS, JIS and KSC
#       have been compared to the mapping information provided by the CJK-JRG,
#       which has exhaustively checked and rechecked.  The mappings for these
#       characters may be taken as final and definitive.
#
#       The mappings in this table between Unicode and Big Five have also been
#       extensively checked and are unlikely to change in the future.  They may
#       be taken as provisionally final.
#
#       The mappings in this table between Unicode and EACC, CCCII, Xerox,
#       and IBM have not been so exhaustively checked.  There may still
#       be errors in these mappings.  Final and authoritative mappings for these
#       character sets will be provided in the near future.  Please notify
#       John_Jenkins@taligent.com of any errors.
#
#       The mappings between Unicode and the Fujitsu corporate character set which
#       were found in earlier versions of this table have been withdrawn because
#       of known errors.
#
#       HISTORY:
#
#       0.0d2     14 Oct 93     Removed Fujitsu mappings
#       0.0d3     14 Mar 94     Changed mapping of Big Five 0xC255 from U+5F5D
#                               to U+5F5E; this provides Big Five -> Unicode ->
#                               CNS mappings which always end in the 1st or 2nd
#                               CNS plane
#
#       Any comments or problems, contact @taligent.com
